Biodiesel Policies Suppress U.S. Soybean Oil Exports

U.S. Vegetable Oil Trade Balance

Source: FAS-PSD (aggregate of the following vegetable oils: soybean, rapeseed, sunflowerseed, coconut, cottonseed, palm, palm kernel, peanut, and olive)

Growing U.S. demand for soybean oil driven by low-carbon fuel mandates will continue to suppress soybean oil exports in 2023/24, widening the trade gap and pushing the United States out of the global soybean oil export market. U.S. production of renewable diesel grew significantly in recent years. While new crushing facilities and expansion of existing facilities may increase domestic supplies of soybean oil, higher biomass-based diesel demand in the United States has caused major shifts in vegetable oil imports.

Until recently, the United States was a major supplier of soybean oil to the world. Exports peaked at 1.5 million tons in 2009/10 and averaged 1.0 million tons between 2010-2021. In 2022/23, U.S. soybean oil exports fell drastically to only 0.2 million tons. At the same time, soybean oil imports surpassed exports, making the United States a net importer of soybean oil for the first time in history. Those shifts came as the U.S. Environmental Protection Agency (EPA) finalized higher multiyear biofuel blending targets.

The change in biofuel policies also lured imports of other feedstocks such as canola oil, tallow, and used cooking oil. U.S. canola oil imports have skyrocketed in 2022/23 and are projected to grow even further in 2023/24. The share of Canada canola exports that went to the United States increased from an average 56 percent from 2018-2021 to 88 percent in the first 8 months of 2023. Other importers, like

China, shifted to rapeseed oil imports from Russia and Belarus instead of Canada. In 2023/24, U.S. rapeseed oil imports are projected to reach a new record of 3.0 million tons.

Higher domestic vegetable oil prices and a strong U.S. dollar encouraged imports of used cooking oil (UCO) to meet domestic biofuel demand. In 2022/23 (October-August), imports of commodities under harmonized system heading 1518.00 (Processed animal, vegetable oils, industrial preps nesoi) reached nearly 882,000 tons, valued at nearly \$1.2 billion. The majority of those imports came from China (37 percent) and Canada (27 percent). This trend is likely to continue into the next marketing year.

MARKET FEATURES

Ukraine Sunflowerseed Oil Shipments Rebound in 2022/23

This month, the expectation for Ukraine sunflowerseed oil exports in 2022/23 (Sept/Aug) was revised upwards 0.4 million tons to 5.6 million. With this change, sunflower oil exports are roughly in line with levels seen prior to the invasion. Several shifting dynamics throughout the marketing year allowed Ukraine to achieve this volume of trade, including higher-than-anticipated sunflowerseed production and crush, trading partner policies, and strong demand for sunflowerseed oil from Asia.

Extraordinarily high sunflowerseed carryin from 2021/22 allowed Ukraine to crush at a strong pace. Ukraine exported an unprecedented amount of whole sunflowerseed to Europe during the first half of the marketing year due to the high supplies. However, after the Black Sea Grain Initiative allowed shipments of products to resume beginning in July 2022, shipments of sunflowerseed oil also picked up pace. In May 2023, several EU member states (and large crushers of sunflowerseed) placed bans on whole sunflowerseed imports which provided additional incentive for Ukraine to shift exports towards products as the former outlets for seed shipments tapered off.

Towards the end of 2022/23, farmers were motivated to sell amid high transportation costs and cash shortages ([AMS Ukraine Grain Transportation Report](#)) and offered supplies at especially competitive prices. Sunflowerseed oil prices have fallen drastically (about 70 percent) from their post-invasion peak in March 2022 and are now trading at an unusual discount to other vegetable oils. The EU, Turkey, and India made large purchases from Ukraine in 2022/23, taking advantage of the discount pricing relative to other edible oils and abundant global supplies. In the EU and Turkey, a significant portion of the imports were also refined and reexported to partners in Africa and the Middle East.

DATA SERIES REVISIONS AND PSD DATABASE ADDITIONS

Brazil Cottonseed Production Revision

Brazil cottonseed production was revised for 2000/01 through 2023/24 due to a series revision for cotton production. Over the last 25 years, a large proportion of cotton production in Brazil has moved from the Southeast to the Center-West region, resulting in a shift in the timing of cotton harvest and is reflected in the series revision. Please refer to the Foreign Agricultural Service's [Cotton: World Markets and Trade](#) publication for further details. Changes in annual cottonseed production were balanced with adjustments to both feed waste domestic consumption and crush. Changes in cottonseed meal production affected feed waste for animal consumption and changes in cottonseed oil production impacted both industrial consumption and food use.

Benin Soybean and Products Additions

As of this publication, USDA's Production, Supply and Distribution (PSD) database was expanded to include soybeans, soybean meal, and soybean oil balance sheets for Benin starting in marketing year 2014/15. According to official Benin Ministry of Agriculture data, soybean production has nearly tripled within the past decade. Prior to 2019/20, Benin soybean exports were minimal, and domestic crush accounted for about 40 percent of production. However, increased foreign investment and growing India and China demand has led to significant growth in both production and exports. Strong export growth has limited supplies available for crush, which remained relatively flat over the past 5 years. Domestically produced soybean meal is used in animal feed rations and soybean oil is consumed as food, although palm oil still accounts for most vegetable oil consumption in Benin.

OVERVIEW FOR 2023/24

Global oilseed production is forecast down 2.0 million tons mainly on smaller India and United States soybean crops. Oilseed exports are down 1.0 million tons on lower Canada rapeseed and Ukraine sunflowerseed. Global oilseed crush is up primarily on higher Ukraine sunflowerseed and China soybean processing; meal consumption is up for the same reasons Vegetable oil trade is up 1.0 million tons on higher sunflowerseed and soybean oil exports. Oil stocks are down 0.5 million tons, with lower storage of sunflowerseed oil in Russia and the EU and soybean oil in China. The projected U.S. season-average farm price for soybeans is unchanged at \$12.90 per bushel.

EXPORT PRICES

Soybean export prices moved lower this month, especially in the United States where the new crop began to arrive on the market while shipments from a record Brazil crop infringed on the U.S. export season. Additional negative pricing pressure was provided by a higher-than-anticipated U.S. quarterly stocks report. Argentina prices were little changed on tight supplies, while Brazil prices were down modestly.

Vegetable oil was a particularly strong driver of oilseed prices this month. Palm oil prices fell to a 3-month low on seasonally-high production and competition from other oils including sunflowerseed oil, which is currently trading at an unusual discount. In the United States, smaller-than-expected August crush volume as well as lower Renewable Fuel Standard credit (RIN) prices moved average soybean oil prices \$104/ton this month.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
